THE "WHEATSTONE" CONCERTINA.

THE "WHEATSTONE" CONCERTINA was invented about the year 1827 by Sir Charles Wheatstone (the inventor of the Electric telegraph), and having been improved from time to time by Messrs. C. Wheatstone & Co., has now become one of the most perfect, durable, and cheapest of musical instruments.

The "Wheatstone" Concertina has a complete chromatic scale, and possesses qualities which have never hitherto been combined in a single musical instrument. It is equally adapted to the most expressive performance and the most rapid execution, whether confined to the succession of single notes, as most other instruments are, or in harmony of two, three or four parts. From the remarkable simplicity of its fingering, and the great facility with which its tones are produced and sustained, it is very easily learned. An instrument which can play the two complete parts of a difficult violin duet, with very little special study cannot be other than easy to acquire; and as it cannot be sounded out of tune, the most perfect crescendos and diminuendos may be obtained without the large amount of practice which is requisite on other instruments. The fingering being the same on the Treble, Tenor, Baritone and Bass Concertinas, enables players to take any part in Trios, Quartets, Orchestral, or other concerted music, which would be impossible in the case of string or other wind instruments. For example, a Violin player cannot play Viola, 'Cello or Bass without knowledge of each instrument, whereas a Treble Concertina player can play the Tenor or Bass with equal facility. These comparisons apply also to the wind instruments, such as Flutes, Clarinets, Bassoons, Oboes, Piccolos, etc.

The Concertina, when played as Obbligato or any other form of accompaniment with the voice, produce a most charming effect; for the Concertina as an aid to the voice, cannot be equalled by any other instrument.

Morton, Charles Rutterford, J. Astley, Colin J. Campbell, Ernest Rutterford, C. & T. Campbell (N.Z.), G. Matusewitch (U.S.A.), the late Signor Guilio Regondi, Messrs. Richard Blagrove, John C. Ward, George Roe, and others, at many concerts during the past and present years, have frequently enabled the musical public to judge of the effects and capabilities of the Concertina. An inspection of the music published will show that, either for solos or accompaniments, it is equal, if not more effective than any other instrument in present use; whilst, in its peculiar effects, and particularly in those of its harmonies, it is unrivalled. The Concertina is capable of performing music written for the Violin, Flute, or any other Orchestral Instruments, besides which many pieces of the highest artistic merit have been expressly composed or arranged by Macfarren, Molique, Wallace, Silas, Regondi, Blagrove, and many others. The Concertina produces the same sound whichever way the Bellows is moved, the action of which becomes very similar to that of the bow of the Violin, Violoncello, etc.

The Concertina can take part in quartets, etc., and do its work—as previously suggested—without in any way interfering with the musical interest; in fact, greatly augmenting it. To still further illustrate its great powers of adaptability and sympathy, when used in an Orchestra or Band for the rendering of any special part, it lends itself entirely to that part, sinking its own individuality. For example, it would be absurd to give a Violin part to a Flute, or vice-versa, but the Concertina being assigned, say, a Flute or Violin part would render that part with all that instrument's characteristics.

Messrs. C. W. & Co., may here mention that all their Concertinas are tuned on the Equal Temperament system, which is the only recognised method that is used for the pianoforte and all other instruments.

Steel vibrators were first introduced by Messrs. C. W. & Co., in the year 1862, for the use of Signor Guilio Regondi and Mr. Richard Blagrove, and have since then stood the severest tests.

All their Concertinas are accurately tuned to the standard pitch, so that sets can be brought together without any trouble to the players. They can also be tuned to any other pitch to suit special requirements. All Messrs. C. W. & Co.'s Concertinas are double action and all the instruments are made entirely upon their own premises under personal supervision.

THE "ÆOLA."

THIS charming little instrument, now attracting such favourable notice in the musical world, has been placed before the public by Messrs. C. WHEATSTONE & Co. (the inventors and sole makers) for several years past.

It is universally admitted to be the finest toned musical instrument of the present day, possessing as it does, in so large a degree, the grand qualities of the tone proper to a Stradivarius violin, together with a marked resemblance to the human voice.

The recent performances of Madame Amy Rowbotham, Miss Edith Drake, The Fayre Four, Mr. John C. Ward, Mr. Richard Blagrove, Mr. Charles Rutterford, Mr. G. Matusewitch, Mr. Ernest Rutterford and other leading Professors have demonstrated the capabilities of the Eola to be far in advance of those of any other portable instrument, and have conclusively proved that whilst it possesses an individuality of tone that is inimitable, it is thoroughly capable of producing and sustaining most of the effects peculiar to stringed instruments, as well as other effects that cannot be produced save by a combination of two or more instruments of other kinds, or by the organ.

The solos and concerted pieces of the great masters written for the Violin, Flute, etc., can be rendered upon the **Eola** with greater effect and precision than is ordinarily possible upon their proper instruments, whilst as the keyboard of the **Eola** is identical with that of Wheatstone's English Concertina, the whole of the important repertoire of the latter is of course available to the player.

The resonant character, and the extreme mellowness and purity of the tone of the Eola together with its deficite and expressive touch combine to recommend the instrument at once to the musical connoisseur as a really sympathetic and legitimate member of the wind instrument family, and one calculated to well repay the trouble of taking up; more especially as at the outset it presents to the student incomparably fewer difficulties to overcome than does any other kind of instrument that can be named. For so simple is the arrangement of the keyboard, and so easy the fingering, that with but slight knowlege of music a beginner who can devote no more than say half-an-hour a day, may become able to perform fairly well on the Eola in the course of a few weeks—an achievement utterly impossible with the Violin, Flute, etc.

The Eola is also invaluable to vocal students when practising, as well as for the rendering by themselves obbligate accompaniments to their performance of songs, a feature in which the instrument is unapproachable save by Wheatstone's Concertina.

The **Ecla** is made with a compass either of three and a half, four, or four and a quarter octaves, and only in one quality, namely, the very best. All **Eclas** are fitted with Messrs. C. W. & Co's. latest (Concertina and **Ecla**) improvements, including their perfected duplex screwed notes, spherical keys, and new steel reeds. They are tuned to any pitch required, and with ordinary care remain in tune many years.
